We've got chemistry

PRACTICAL APPROACHES TO STATISTICAL DESIGN OF EXPERIMENTS (DoE)

for the Design of Robust
Chemical Processes

14-15 MAY 2019

Boston, USA
Metro Meeting
Center

A 2 day course
presented by
Dr Andrei Zlota

"...For a practicing organic chemist, DoE is a fairly abstract concept. This course does a wonderful job of conceptualizing the entire process, and make it understandable. It is also well balanced... and I found myself absolutely engaged for the full duration of the course"

if registered before
15 February 2019

14-15 May 2019 Boston, USA, Metro Meeting Center

INTRODUCTION

The synergy between fundamental science and statistical design of experiments (DoE) has been demonstrated to create more significant process understanding than that achieved by the same number of one-variable-at-a-time (OVAT) experiments.

This course takes a balanced approach presenting basic DoE theory as well as numerous examples of DoE use in the pharmaceutical industry. The course will discuss statistical and practical significance, assumptions and limitations of DoE methodology, together with practical approaches for the process scientist to be in control of the DoE investigation (and not the computer).

Precedent and experience compel many chemists to use OVAT experimentation in spite of its incomplete nature, and in spite of its inability to detect factor interactions, e.g., cases when the impact of one factor depends on the level of another factor. When such interactions occur between scale dependent and scale independent factors, ignoring such factor interactions can lead to high risk process scale-up and technology transfer.

Participants will learn how to design effective screening experiments, how to use response surface methods for reaction and analytical method development, how to design robust processes, and how to quantify the risk associated with the implementation of the processes developed. Several commercial DoE software platforms will be reviewed. For the benefit of process scientists, engineers, formulators*, analytical chemists and manufacturing personnel, this course includes highly interactive, hands-on workshops.

COURSE OUTLINE

Introduction

- > Why DoE?
- > Statistics for chemical process R&D: friend not foe
- > Synergy between statistical, kinetic and engineering models
- > Univariate experimentation limitations
- > Design of experiments (DoE), a multivariate method to investigate multivariate processes

Statistical Design of Experiments (DoE)

- > Requirements for a successful DoE
- > Responses
- > Scale independent and scale dependent factors
- > Meaningful use of categorical factors
- > Factor ranking; factors to be fixed, factors to be varied
- > Ranges, number of levels
- > Randomization, replication, centerpoints, blocking

Screening the Experimental Space

- > DoE commercial software platforms
- > Full factorial designs
- > Fractional factorial designs: advantages and challenges
- > Plackett-Burman designs
- > Design efficiency, design resolution, statistical power of a design
- > Chemical reaction, and workup: together or separate?
- > Design augmentation; practical strategies for cost-effective screening
- > Using DoE to set raw material specifications

***A DoE course dedicated to drug product development is also available; if interested, please inquire.**

Analyzing DoE

screening investigations

- > Objectives
- > Key statistical concepts
- > The value of redundancy, the power of visualization tools
- > Practical vs. Statistical significance
- > Case studies: chemical reactions, API crystallizations

Response Surface Methodology (RSM)

- > Types of "optimization"
- > RSM design options
- > Analysis of RSM designs, model manipulation
- > Model verification experiments
- > Case studies: chemical reactions, API crystallizations

DoE and Quality by Design (QbD)

- > The concept of design space; risk calculations using the DoE model
- > Critical Quality Attributes and Critical Process Parameters
- > DoE for process robustness assessment, and for process validation; process capability indices

"Advanced Topics" (time permitting)

- > DoE and Principal Component Analysis (PCA)
- > DoE for process troubleshooting
- > DoE investigating scale-dependent and scale-independent factors
- > Mixture designs

IN-HOUSE COURSE

For 8+ people contact us to discuss holding this event In-House -

SCIENTIFIC UPDATE

We've got chemistry

Start 9.00am - Tuesday 14 May

Finish 3.30pm - Wednesday 15 May

Course dinner 7.00pm - Tuesday 14 May

Course Fee: \$1,999 / **Early Bird Rate:** \$1,599

which includes comprehensive course manual, refreshments throughout the day, lunch and one course dinner.

Course fee: \$1,999 / Early Bird Rate: \$1,599

COURSE TUTOR

Dr Andrei Zlota

The ZLOTA
Company LLC

Andrei obtained an M.Sc. in Chemical Engineering from the Bucharest Polytechnic Institute (Organic Chemical Technology, 1980). After working in the industry for several years, he obtained an M.Sc. in Chemistry from the Technion (Organic Chemistry, 1986).

Subsequently he obtained a Ph.D. in Chemistry from the Weizmann Institute of Science (Organometallic Chemistry, 1991). He has been a regular contributor to the Organic Process R&D Journal (OPRD) Highlights from the Literature section since 2003, and he also participates

in the review of papers submitted for publication in OPRD. In 2006 Andrei founded his consulting firm, The Zlota Co., LLC, specializing in Quality by Design (QbD) implementation, including practical statistical design of experiments, accelerated process scale-up, and meaningful Process Analytical Technology practice.

Andrei provided QbD training to more than 2,000 scientists from 180 companies in the US, Europe and Asia. Thirty five companies obtained, and continue to obtain project support from The Zlota Co. with their successful implementation of various elements of QbD methodology.

Note: A full version of Andrei's biographical note is available on our website.

Upon completion of the course participants will be able to:

- > Meaningfully include numerical continuous, numerical discreet, and categorical variables in DoE matrixes
- > Know when to separate and when to combine scale dependent and scale-independent parameters in a DoE investigation
- > Design effective DoE screening matrixes, suitable for the objectives at stake
- > Design robust processes, capable of tolerating variability in raw materials and process parameters
- > Quantify process risk
- > Use the DoE generated process understanding for Quality by Design (QbD) implementation

VENUE

The Metro Meeting Centers

101 Federal Street, 4th Floor
Boston
MA 02110
USA
(617) 737 1200

Transport

Metro Meeting Centers is 10 minutes from Boston's Logan International Airport and within a short distance to public transportation.

A list of nearby hotels will be sent to you when you register.

REGISTRATION

You can either use our fast online booking system or mail or fax the attached registration form to:
Scientific Update
Maycroft Place, Stone Cross, Mayfield,
East Sussex, TN20 6EW, UK
Fax Number +44 1435 872734

How to Pay

When you register online, you can have the option to pay via credit card (Amex, Mastercard or Visa). For email payments please include course title, card number, expiry date and security code. A receipted invoice will be automatically generated once paid and sent via email. Should your company wish to pay by cheque or bank transfer bank details will be supplied with an invoice.

Bank Transfer or Cheque

Should your company wish to pay by cheque or bank transfer, on booking you can choose between paying in either €, \$ or £. All bank details will be supplied with an invoice.

Group Discounts

If you are booking a large group of delegates, further discount may be applicable. Please contact us directly to find out more.

Confirmation of your registration

These will be sent via email.

Late Applications

Late applications are permitted depending on availability, please register online and pay by credit card only.

Cancellations/Refunds

Should you be unable to attend and cancel in writing no later than 1 month before the start of the course, Scientific Update will refund your registration less £300 (or equivalent in €/€) processing fee. Unfortunately refunds are not possible after that date. Substitutions can be made at any time.

14-15 May 2019 Boston, USA

No. of attendees @ \$1,999

SAVE 20% Early Bird Rate \$1599

if registered before 15 February 2019

Payment Methods

Payment will be made by:
 Cheque Bank Transfer Credit Card

In Currency:
 Dollars GBP* or Euros*

We accept the following credit cards:
 Amex* Mastercard Visa

To pay by credit card a secure link will be provided once you receive your booking confirmation email, this will then take you to a secure payment gateway.
 *payments via Amex can only be made in US dollars

*** Currency Payments**
 If you select to pay in GBP, or Euros the amount charged will be based on the exchange rate at the time of preparing the invoice.

Discounts
 If you are booking two or more people on to this course, please contact us directly to find out whether a further discounts can be applied.

Cancellations
 Should you be unable to attend and cancel in writing no later than 1 month before the start of the course, Scientific Update will refund your registration fee less £300 (or equivalent in €/\$) processing fee. Unfortunately refunds are not possible within 1 month of the course date. Substitutions can be made at any time.

Data Protection
 Scientific Update Ltd is registered under the Data Protection Act 1998. We will store your information securely and only share your contact details with other attendees at this event. If you are happy for your details to be passed to any third parties please tick here:

For full terms of business and payment details please see our website
